

# Warrell Creek to Nambucca Heads – Pacific Highway Upgrade Project

## ENVIRONMENT PROTECTION AUTHORITY MONTHLY REPORT

**July 2015** 

Pacifico Project Number: WC2NH

A team consisting of RMS and Pacifico (ACCIONA Ferrovial JV) to upgrade the Pacific Highway at Warrell Creek to Nambucca Heads

#### 1. Introduction

Environmental Protection Licence (EPL) 20533 was issued to ACCIONA Infrastructure for the Warrell Creek to Nambucca Heads Pacific Highway Upgrade project on the 16<sup>th</sup> December 2014. Condition R1.8 of the EPL requires the licensee to provide the EPA with a monthly report containing the following information:

- a) details of all non-compliances with the conditions of this licence and measures taken, or proposed, to prevent a recurrence of such a non-compliance; and
- b) details of all discharges from the sediment basins where the water quality results exceed the limits prescribed by Condition L2.4 including the results of rainfall measurements to demonstrate compliance with Condition M4.1; and

The report referred to in this condition must be received by the EPA within 10 working days of the end of each month.

This document has been prepared to fulfil the requirements of Condition R1.8.

#### 1.1 Description of Works

The project's construction activities during July 2015 were limited to the following:

- PCY Earthworks and PC formwork;
- Clearing in the State Forest;
- Installation of erosion and sediment controls;
- Installation of permanent fauna fencing;
- Earthworks including crushing;
- Production blasting;
- Foundation treatments
- Concrete crushing
- Road maintenance
- Pacific Highway Diversion road construction
- Access and haul road construction;
- Sediment basin construction
- Rural fencing installation
- Continuation of topsoil stripping;
- Installation of temporary waterway crossings;
- Bridge works including temporary work platforms;
- Commencement of piling, including driven piling;
- Clearing through Flying Fox area;
- Drainage culvert installation;
- Shotcreting of permanent drains;
- Site compound establishment;
- Installation of Frog Fencing;
- Geotechnical Investigations;
- Utilities relocation; and
- Site Survey

The works scheduled for next month include:

- PCY Earthworks and PC formwork;
- Topsoil stripping;
- Installation of temporary waterway crossings;
- Installation of permanent fauna and rural fencing
- Earthworks including crushing;
- Production blasting;
- Continuing of piling including driven piling;
- Continuing bridge works including wick rock and temporary work platforms;
- Earthworks through the flying fox area;
- Drainage works, including shotcreting permanent drains;
- Installation of erosion and sediment controls;
- Installation of permanent boundary fencing;
- Continuing culvert installation;
- Site compound establishment (Northern Compound);
- Geotechnical Investigations;
- Utilities relocation:
- Foundation treatment;
- Concrete crushing;
- Road maintenance;
- Pacific Highway Diversion road construction;
- Access and haul road construction;
- Sediment basin construction;
- Installation of temporary waterway crossings; and
- Site Survey.

#### 1.2 Consultation Activities

The project's consultation activities during July 2015 included various community letterbox drop notifications and the following:

Groups	Date	Key Topics
Environmental Review Group	21/07/15	Construction Progress, Design Update, Upcoming works, EWMS discussion, Environmental Update, Monitoring update.
Local community	01/07/15	Controlled blasting – Community Briefing Session

The information provided during the blasting community information session held on 1 July can be summarised as follow:

- Planned blasting activities for the WC2NH Pacific Highway upgrade
- Current environmental constraints linked to the activity
- Minister's Conditions of Approval and Environmental Protection Licence for blasting

- Consultation processes and procedures
- Presentation of the potential impacts and how they are monitored and managed
- Video showing an actual blast engineered with sought increased blasting limits
- Communication lines for sensitive receivers

#### Other consultation activities:

- Consultation with residents regarding increasing the blast limits
- Ongoing consultation with property owners regarding property works
- Consultation with affected residents regarding temporary stockpiles
- Consultation with affected residents regarding First Flush Systems
- Letterbox drop of Quarterly Project update
- Notification of the planned closure of the Nursery Road pedestrian bridge
- Notification documentation for drive piling were made available at display centres and Nambucca River Tourist Park, as well as electronically distributed to Council. Other sensitive residents were notified via phone and invited to contact the community team should they have any further questions
- Nambucca bridge fact sheet at display centres which will also be distributed at the dropin session on August 22
- Blasting fact sheets at display centres which were also distributed at the July blasting CIS
- Piling fact sheet at the display centres which will also be distributed during the planned drop-in session on August 22nd

#### At House Noise Treatments

The At House noise treatment program is currently being managed by RMS and is not part of the ACCIONA (Pacifico) Scope of Works and Technical Criteria.

#### <u>Upcoming community and stakeholder activities for August 2015:</u>

- Drop in session to notify residents and river user groups of the change to the navigation rules during the construction of the new Nambucca River Bridge
- Consultation for the construction of crib sheds on Bald Hill and Gumma roads.
- Consultation with Old Coast Road residents re: the new alignment of Old Coast Road
- Ongoing weekly consultation with sensitive receivers in Cut 11 re: blasting and any feedback.

Monthly Report June 2015 Page 4

#### 2. Weather

#### 2.1 Discussion

The automatic recording weather station at the main site compounds (north and south) records rainfall totals daily at 9AM. The total rainfall received for the month is as follows:-

Month	Total monthly rainfall	Location
01/07/15 – 31/07/15	16mm	Northern Compound
01/07/15 – 31/07/15	16.2mm	Albert Drive Compound

The

site experienced a total of 11 rain days throughout the month of July 2015.

During July, rainfall received on site was lower than the July monthly average of 77.4mm. A summary of weather conditions recorded over the month for Smoky Cape by the Bureau of Meteorology is detailed below in Table 2.3.

The daily summaries for rainfall received in July at the Albert Drive compound and Northern Compound are shown below in Table 2.1 and 2.2.

## 3. Surface Water Monitoring

Monthly sampling was undertaken by ACCIONA (Pacifico) on the 27<sup>th</sup> July during a dry period, field tests and lab samples were taken. The results are available in Appendix A.

No wet events were recorded in July as there was no 24hr period where rainfall exceeded 10mm hence no post rainfall monitoring was triggered.

Pacifico are awaiting trigger levels for baseline monitoring from RMS, so comparisons will be made to ANZECC guidelines and between upstream and downstream levels to determine site works impact.

#### Dissolved oxygen (DO) levels noted to be below ANZECC criteria at:

- Upper Warrell Creek upstream and downstream but are within background preconstruction ranges from 0.9mg/L to 9.6mg/L. DO levels decreased by less than 10% from upstream (3.85mg/L) to downstream (3.58mg/L).
- Stoney Creek downstream but are within background pre-construction ranges from 1.5mg/L to 8.4mg/L. DO levels decreased by more than 10% from upstream (5.09mg/L) to downstream (3.82mg/L).
- Lower Warrell Creek upstream and downstream but are not within background pre-construction ranges from 5 to 9.4mg/L. DO levels decreased by less than 10% from upstream (3.93mg/L) to downstream (3.71mg/L).
- Gumma Wetlands upstream and downstream but are within background preconstruction ranges from 0.6 – 13.6mg/L) with the exception of Unnamed Channel Gumma Wetland Upstream (Omg/L)
- Nambucca River upstream and downstream were below ANZECC criteria with the exception of Nambucca River South downstream.

A decrease in DO at Stoney Creek from upstream and downstream of > 10% prompted an inspection which revealed no vegetative matter had been left in the waterway which is known to contribute to low DO.

The low dissolved oxygen levels are consistent with baseline water quality data collected by RMS prior to the commencement of construction activities at the locations noted above.

A possible reason is due to the current dry weather this may have resulted in a lower reading of dissolved oxygen.

#### pH levels noted to be outside of ANZECC criteria at:

A low pH level was also recorded at Upper Warrell Creek (6.46 & 6.46pH units) and at Gumma Wetlands upstream (6.85pH units). The low pH levels recorded are within background pre-construction pH levels, which range from pH 5.1 to pH 7.9.

#### <u>Turbidity levels noted to be outside of ANZECC criteria at:</u>

A high turbidity reading was recorded at Unnamed Creek Gumma West (75NTU) and Nambucca River South (10.4 NTU). Gumma wetlands has variable background readings ranging from 2.4 – 951 NTUs, while Nambucca River has background turbidity readings from 3.8 – 98 NTUs.

#### Metals levels noted to be outside of ANZECC criteria at:

All Gumma Wetland monitoring locations excluding Gumma Wetland upstream for aluminium. It is noted that aluminium levels were not measured during baseline monitoring. One site at Gumma (unnamed creek Gumma West) also had elevated Copper (0.002mg/L), which is within with baseline monitoring results which ranged from <0.001mg/L to 0.022mg/L.

Elevated zinc levels were also recorded at Upper Warrell Creek downstream (0.011mg/L) and unnamed creek Gumma north (0.008mg/L), which is within baseline monitoring results of <0.005mg/L to 0.1mg/L.

#### Nutrient levels noted to be outside of ANZECC criteria at:

Elevated total phosphorus levels were recorded at Unnamed Creek Gumma West upstream (0.18 mg/L), Unnamed Creek Gumma East upstream (0.14mg/L), Unnamed Creek Gumma North downstream (0.25mg/L) as well as Nambucca River South upstream (0.04mg/L) (using trigger values from Table 8.2.2.1 Volume 2 of ANZECC water quality guidelines, as there is no value provided in the standard ANZECC 95% trigger levels for Total Phosphorus). These results are within baseline monitoring results of < LOR to 1.9mg/L.

## 4. Sediment Basin Water Monitoring

Water was released from commissioned sediment basins between the 17<sup>th</sup> of July and 30<sup>th</sup> July after water was transferred into them from works in nearby waterways. Water pumped into basins was treated and released as soon as possible, especially if rainfall is predicted in the 5 day forecast. Table 4 below has the water quality results recorded for the water release events:

Table 4 – Water Release Register

## Water Release Register

Date	Basin ID	Oil and Grease (visible)	рН	Turbidity (NTU)	TSS* (mg/L)	Approx Volume Discharged (kL)	Comments
							Water released pumped
							into basin from waterway works during extended dry
1= (0= (001=		l <u>.</u> .					,
17/07/2015	B55.5	N	7.28	64.5		493	period
							Water released pumped
							into basin from waterway
							works during extended dry
20/07/2015	B44.44	N	7.54	31		350	period
							Water released pumped
							into basin from waterway
							works during extended dry
30/07/2015	B44.44	N	7.49	8.7		400	period

TSS is taken every third discharge on average

## 5. Noise Monitoring

Monthly routine construction noise monitoring was undertaken on the 27<sup>th</sup> and 28<sup>th</sup> July at eight locations near to the construction works.

No noise complaints were received this month. The Noise monitoring results are available in Appendix A.

The noise levels recorded at Cockburns Lane, Bald Hill Road, Mattick Rd and Albert Drive were marginally elevated above the Noise Management Levels. At Cockburns Lane a piece of equipment causing excess noise (squeaking) was identified and placed out of service until necessary maintenance could be carried out to reduce the noise levels. Levels were consistent with background noise levels before the commencement of construction at the sensitive receiver from the nearby mill and highway traffic.

Simultaneous activities were identified as contributing to the exceedance at Albert Drive, mitigation for this including minimisation of simultaneous activities at the one location. Levels were consistent with background noise levels before the commencement of construction at the sensitive receiver from private traffic, dogs, birds and highway traffic. Noise monitoring is planned to be undertaken in August to verify the success of this mitigation measure.

Mattick Road LAeq levels monitored are consistent with the predicted modelled levels for dozer works, however exceeds the NML level for area. This measured level is consistent with Background levels prior to construction.

## 6. Vibration Monitoring

Vibration monitoring was undertaken on July 27 2015 at a sensitive receiver after concerns were raised about piling for the Nambucca Bridge. Piling with a 28T impact hammer triggered the monitoring equipment, with the peak vector sum being below the 2mm/s limit (0.225m/s at 4.857 seconds was the recorded level).

## 6.1 Blasting

Two blasting events occurred in July 2015, 7th and 27th July 2015.

One exceedance occurred on the 7<sup>th</sup> July prior to the blasting limits being approved from 5mm/s to 25mm/s for peak particle velocity. A reading of 5.773mm/s was recorded at the closest sensitive receiver to Cut 11.

There have been no exceedances for Overpressure from these two blasts, the highest recorded was 108dB on the 7<sup>th</sup> July.

We are required to achieve less than 5% exceedance (of 5mm/s limit) within a 12month period for those sensitive receptors that have not agreed to the 25mm/s limit. We have anticipated a total of 49 blasts. At the end of July our percentage is 66.66% which is expected to drop to 4.1% at the end of the blast program.

### 7. Dust Monitoring

Dust deposition gauges (DDG) were placed at nearby sensitive receivers from the 9/6/2015 to 10/7/2015. DDG results are available in Appendix A.

An elevated level of 6.6mg/m2/month was recorded at dust deposition gauge DDG3 for total insoluble matter (TIM), which is located at a sensitive receiver near the vicinity of Scotts Head Road and the Pacific Motorway. TIM = Combustible Matter +Ash content. Ash content can be attributable to construction works. We have modified our analysis for the next round of monitoring to include ash content.

It was noted numerous times during the monitoring period that sediment was being tracked by trucks exiting the Quarry on to the Motorway resulting in dust generation by passing traffic. This is considered to be a contributing factor to the elevated dust level at this location. EPA will be notified if noticeable dust continues to be produced from this source.

### 8. Groundwater Monitoring

ACCIONA (Pacifico) have undertaken groundwater monitoring on the 15/7/2015 and 16/7/2015. The results from the groundwater monitoring is available in Table 4 of Appendix A.

The groundwater monitoring results have been provided to RMS to provide advice on the trigger levels determined during the baseline sampling. The finalised groundwater report from the baseline sampling have not been issued from RMS to Pacifico including groundwater triggers.

## 9. Acoustic Investigations

No acoustic investigations were undertaken in July 2015.

### 10. Complaints

#### 9.1 Summary of Complaints for the month

The following is a brief summary of environmental complaints received in July 2015 On Monday 13 July 2015, a resident of Old Coast road contacted Bob Higgins and the EPA regarding concerns about the potential presence of asbestos in the recycled concrete used on a temporary access track leading to his property. Upon receipt of the complaint, the area containing the fill was cordoned off with safety fencing. The concern was communicated to the community team via RMS and the environmental team. The matter was treated as urgent and acted upon immediately. On Wednesday, 15 July 2015, Pacifico took the following actions:

- Testing was carried out on site this morning at 3 locations (Access in question, Stockpile at 54 Old Coast Road, Stockpile at OC6);
- An environmental representative of RMS was present for the testing of the main stockpile at 54 Old Coast Road;
- Both AADEMEX and Regional Geotechnical Solutions (the 3rd party soil testers engaged to do the testing) confirmed there was no visual evidence of the presence of asbestos at any location; and
- Tests were treated as a matter of urgency

Pacifico received the results on Fri 17 July 2015 which concluded that no asbestos was present in the recycled concrete used. The residents were advised in person and via email of the results. The recycled material has been replaced with road base to the satisfaction of the residents.

On Friday 31 July, two residents of River Street in Macksville called to complain about dust. One chose to remain anonymous. Both reported sighting the sweeper trucks driving past their respective house and not having their brushes in operation. They deemed the operations to be ineffective. The community team contacted the engineering team in charge of the area at 11:55pm to investigate the feedback. The sweeper trucks merely drove past the resident's houses to get to the area in need of sweeping. To address the situation effectively, the sweeping operations was extended to the whole street on Friday afternoon. The resident who asked for an update was contacted at 3:17pm of the actions taken and was invited to call back if need be.

### 11. Non-Compliance

## 10.1 Summary of Non-compliances

A level 1 incident and non-conformance occurred on the 30<sup>th</sup> July 2014 at Albert Drive connection south.

Early clearing of the southern end of the Northern Albert Drive and Pacific Highway intersection upgrade outside of Project Boundary. 206m2 of roadside vegetation (predominately Camphor laurel, lantana and slash pines with some native regrowth she oaks and acacia species.

EPA were notified verbally on Friday 31<sup>st</sup> July following confirmation from survey that clearing had continued past the project and EPL boundary. Incident report form and tool box talk including initial corrective actions were sent to the EPA early the

following week. Pacifico are undertaking an investigation (Complyflow) into the incident and the report will be forwarded to EPA once complete.
