

Warrell Creek to Nambucca Heads – Pacific Highway Upgrade Project

ENVIRONMENT PROTECTION AUTHORITY MONTHLY REPORT

November 2016

Pacifico Project Number: WC2NH

A team consisting of RMS and Pacifico (ACCIONA Ferrovial JV) to upgrade the Pacific Highway at Warrell Creek to Nambucca Heads

1. Introduction

Environmental Protection Licence (EPL) 20533 was issued to ACCIONA Infrastructure for the Warrell Creek to Nambucca Heads Pacific Highway Upgrade project on the 16th December 2014. Condition R1.8 of the EPL requires the licensee to provide the EPA with a monthly report containing the following information:

- a) details of all non-compliances with the conditions of this licence and measures taken, or proposed, to prevent a recurrence of such a non-compliance; and
- b) details of all discharges from the sediment basins where the water quality results exceed the limits prescribed by Condition L2.4 including the results of rainfall measurements to demonstrate compliance with Condition L2.5; and
- c) details of results of any acoustic investigation made in relation to Condition L4.2d); and

The report referred to in this condition must be received by the EPA within 10 working days of the end of each month.

This document has been prepared to fulfil the requirements of Condition R1.8.

1.1 Description of Works

The project's construction activities during November 2016 were limited to the following:

- Bitumen sealing work
- Clearing and Grubbing
- Topsoil stripping
- Earthworks including crushing
- Continuing bridge works including piling, headstock construction, pile caps, girder placement, deck unit installation and temporary work platforms
- Installation of monitoring instruments settlement plates
- Continuing culvert works
- Batter stabilisation using hydromulch (permanent design seed mix)
- Topsoil Amelioration and Blending
- Concrete Lined Drains
- Basin Decommissioning (north)
- Basin Maintenance including dewatering
- Installation of Erosion and Sediment Controls
- Concrete pavement installation including sawcutting
- Concrete pavement drain installation
- Pavement Drainage installation
- Sub-soil drain installation
- Permanent landscape planting

Works scheduled for next month include

- Earthworks including crushing
- Clearing and grubbing (North Facing Ramps)
- Topsoil Strip (North Facing Ramps)

- Installation of second concrete batch plant in the southern portion of the Project
- Continuing bridge works including piling, headstock construction, pile caps, girder placement, deck unit installation and temporary work platforms
- Continuing culvert works
- Batter stabilisation using hydromulch (permanent design seed mix)
- Topsoil Amelioration and Blending
- Concrete Lined Drains
- Basin Decommissioning (north)
- Basin Maintenance including dewatering and desilting
- Installation of Erosion and Sediment Controls
- Removal of temporary bridge (LWC)
- Concrete pavement installation including sawcutting
- Concrete pavement drain installation
- Pavement Drainage installation
- Sub-soil drain installation
- Asphalt pavement trial and installation of asphalt pavement
- Commencement of asphalt batch plant installation
- Installation of concrete batch plant at Cut 10
- Permanent landscape planting

1.2 Consultation Activities

The project's consultation activities during November 2016 included the following:

| Table 1 | Consultation Activities | |
|---------|---|--|
| | | |

| Groups | Date | Key Topics |
|------------------------------|----------------------|--|
| Environmental Review Group | 18/10/16 | Construction Progress, Design Update, Upcoming works, Environmental Update, Monitoring update, Out of Hours Works, Incidents and Community Complaints |
| School group tour | 10/11/16 | St Patrick's Primary School Macksville – 43 11yr-olds half-day tour of alignment |
| Community group presentation | 17/11/16 | Macksville Probus Club – 25 members – presentation from Pacifico Construction Manager and RMS Project Director |
| Toolboxes | Wednesdays each week | Key Safety, Environment, Traffic and Community messages for the entire workforce. Also, advising workforce of visitors to site. |

Other Consultation Activities:

- Obtained agreement for out of hours work for Lower Warrell Creek girder deliveries
- Ongoing night time delivery of girder notifications: traffic alert information, emails and text messages to distribution list

- Obtained agreements for Out of hours work for Bald Hill Road concreting, including broader notification
- Invitation to entire email distribution list for final quarterly Community Information Sessions next month

At House Noise Treatments

The At House noise treatment program is currently being managed by RMS and is not part of the ACCIONA (Pacifico) Scope of Works and Technical Criteria.

All enquiries received are emailed to GHD representative and appropriate RMS personnel.

Upcoming Community and stakeholder activities:

- Announce RMS approval to community for construction of asphalt plant
- Notify Christmas shutdown arrangements
- Notify various traffic changes for Bald Hill Road
- Notify permanent closure of Albert Drive north and new bridge opening
- Notify 90-day look-ahead for North Facing Ramps and traffic staging for southern Old Coast Rd
- Notify Bridge openings for Mattick Road
- Notify for Scotts Head Road girder lifts for Upper Warrell creek bridge
- Further school visits and tours including construction personnel and RMS representatives likely first quarter 2017

2. Weather

2.1 Discussion

The automatic recording weather stations at the main site compounds (north and south) records rainfall totals daily at 9AM. The total rainfall received for the month is as follows: -

Table 2 - Precipitation

| Month | Total monthly rainfall | Location |
|---------------------|---------------------------|--------------------------|
| 01/11/16 – 30/11/16 | 20.2mm | Northern Compound |
| 01/11/16 – 30/11/16 | 35.8mm | Albert Drive Compound |

The site experienced a total of 14 rain days throughout the month of November 2016.

During November, rainfall received on site was lower than the November monthly average of 117.1mm. A summary of weather conditions recorded over the month for Smoky Cape by the Bureau of Meteorology is detailed below in Table 2.3.

The daily summaries for rainfall received in November at the Albert Drive Compound and Northern Compound are shown below in Table 2.1 and 2.2.

| Table 2.1 – | Rainfall | recorded | at | Albert | Drive | Southern | Compound | Automated |

3. Surface Water Monitoring

Pacifico have been provided trigger levels for baseline monitoring from RMS, these will be compared against monthly data as well as between upstream and downstream sites to determine works impact.

Monthly sampling was undertaken by ACCIONA (Pacifico):

Wet Sampling Event

A "wet" sampling event (>10mm in 24 hours) was undertaken on the 10th of November 2016, lab sampling and field testing was undertaken. Results are available in Appendix A.

pH levels noted to be outside trigger levels at:

Nambucca River downstream (7.64). It is noted that this is only marginally above trigger levels (7.56). All controls were in place for the site with no works being undertaken within the waterway.

Conductivity levels noted to be above trigger levels at:

Gumma Wetlands downstream (1.16mS/cm). It is noted that this was a minor exceedance of trigger levels (0.842mS/cm). All controls were in place for the site

with no works being undertaken within the waterway. It is noted that only one set of trigger values has been provided for both upstream and downstream sites, which does not allow for any background variability between upstream and downstream sites.

Turbidity levels noted to be above trigger levels at:

Nambucca River upstream (92 NTU) and downstream (20.1 NTU). It is noted that levels decreased from upstream to downstream sites, and are therefore unlikely to be attributable to construction activities. It was also noted in the field that wind chop was stirring sediment up near the banks, which contributed to the higher turbidity readings for the site.

Dissolved oxygen levels noted to be below trigger levels at:

Upper Warrell Creek upstream (1.49mg/L) and downstream (1.07mg/L). All controls were in place for the site, with no works being undertaken within the waterway. Low DO levels are potentially as a result of decaying vegetative matter within the waterway.

Lower Warrell Creek upstream (1.74mg/L) and downstream (1.67mg/L). It is noted that levels only decreased marginally from upstream to downstream sites and are therefore unlikely to be attributable to construction activity. All controls were in place for the site.

Nambucca River upstream (2.59mg/L) and downstream (2.68mg/L). It is noted that levels increased from upstream to downstream sites and are therefore unlikely to be attributable to construction activities.

Metals noted to be outside of trigger levels at:

Upper Warrell Creek recorded elevated levels of manganese downstream (0.328mg/L). It is noted that these levels are well within ANZECC criteria (1.9mg/L). Levels of zinc were also elevated upstream (0.064mg/L) and downstream (0.045mg/L). It is noted that levels decreased from upstream to downstream sites and are therefore unlikely to be attributable to construction impacts. Controls were in place for the site with no activities being undertaken within the waterway.

Stony Creek recorded elevated levels of manganese upstream (0.085mg/L) and downstream (0.086mg/L), zinc upstream (0.211mg/L) and downstream (0.036mg/L). Manganese levels were well within ANZECC criteria (1.9mg/L). Zinc and manganese levels remained consistent or decreased from upstream to downstream sites and are therefore unlikely to be elevated due to construction impacts. Controls were in place at the site with no activities being undertaken within the waterway.

Lower Warrell Creek recorded elevated levels of cadmium (0.0014mg/L), manganese (1.29mg/L), nickel (0.029mg/L), zinc (0.145mg/L) and iron (2.35mg/L) downstream. It is noted that all controls were in place for the site.

Nutrients noted to be outside trigger levels at:

Stony Creek recorded elevated levels of nitrite downstream (0.03mg/L). It is noted that nitrite levels decreased from upstream (0.07mg/L), but that no trigger levels for nitrite upstream have been provided. The elevated levels are therefore unlikely to be attributable to construction impacts. All controls were in place for the site, with no construction activities being undertaken within the waterway.

Lower Warrell Creek recorded elevated levels of total nitrogen downstream (1.2mg/L), nitrite upstream (0.04mg/) and downstream (0.55mg/L), ammonia downstream (0.19mg/L). All controls were in place for the site, with no activities being undertaken within the waterway. These results are therefore not likely to be attributed to construction impacts. Decaying vegetation within the waterway potentially contributed to the exceedance of trigger levels.

Nambucca River recorded elevated levels of nitrogen upstream (0.9mg/L) and downstream (1.1mg/L). Levels only slightly changed from upstream to downstream sites and the elevated levels are therefore unlikely to be as a result of construction impacts. All controls were in place for the site..

TSS levels noted to be above trigger levels at:

Stony Creek downstream (12mg/L) recorded elevated levels. It is noted that there was only slight increase from upstream (8mg/L) to downstream sites, therefore these elevated levels are unlikely to be as a result of construction impacts. All controls for the site were in place, with no construction activity being undertaken within the waterway.

Dry Sampling Event

A "dry" sampling event was undertaken on the 23rd November 2016, lab sampling and field testing was undertaken. Results are attached in Appendix A.

pH levels noted to be outside of trigger levels at:

Lower Warrell Creek recorded elevated pH levels upstream (7.28). It is noted that this was only a minor exceedance of trigger levels (7.02) and that these levels are within ANZECC criteria (6.5-8.0). All controls were in place for the site.

Nambucca River recorded elevated pH levels upstream (7.76) and downstream (7.85). It is noted that the 20th and 80th percentile trigger levels for Nambucca River are both pH 7, with any results apart from pH7 being outside of trigger levels. It is noted that these levels are within ANZECC criteria (6.5-8.0). All controls were in place for the site, with no activities being undertaken within the waterway.

Turbidity (NTU) noted to be above trigger levels at:

Stony Creek downstream (10.2 NTU). All controls were in place for the site, with no activities undertaken within the waterway. It is noted that levels only increased slightly from upstream (9.1 NTU) and are thus unlikely to be attributed to construction activities.

Lower Warrell Creek upstream (39.2 NTU) and downstream (19.4 NTU). It is noted that levels decreased from upstream to downstream sites and are unlikely to be as a result of construction activities. All controls were in place for the site..

Nambucca river recorded elevated levels upstream (65.2 NTU) and downstream (74.6 NTU). All controls were verified to be in place for the site, with no activities being undertaken within the waterway. It was noted that wind chop was causing disturbance of sediment from the river bank, which may have contributed to the elevated levels at the site.

Dissolved Oxygen (DO) noted to be below trigger levels at:

Stony Creek downstream (3.03mg/L). It is noted that levels only decreased slightly from upstream (3.09mg/L) and is unlikely to be due to construction activities. All controls were in place for the site with no activities being undertaken within the waterway.

Lower Warrell Creek upstream (4.20mg/L) and downstream (3.84mg/L). All controls were verified to be in place for the site. Decaying vegetation within the waterway may have contributed to the low DO levels.

Nambucca River upstream (4.49mg/L) and downstream (4.8mg/L). It is noted that levels increased from upstream to downstream sites and are thus unlikely to be due to construction activities. All controls were in place for the site, with no construction activities being undertaken within the waterway.

Metals were noted to be above trigger levels at:

Stony Creek recorded elevated levels of magnesium upstream (0.132 mg/L) and downstream (0.169 mg/L). It is noted that these levels are well within ANZECC criteria (1.9mg/L). All controls were in place for the site, with no construction activities being undertaken within the waterway.

Lower Warrell Creek recorded elevated levels of arsenic upstream (0.002mg/L) and downstream (0.002 mg/L), nickel upstream (0.002 mg/L) and downstream (0.002mg/L), zinc downstream (0.007mg/L). All values were within ANZECC criteria. All controls were in place for the site, the elevated levels are therefore unlikely to be as a result of construction impacts.

Nutrients noted to be outside of trigger levels at:

Stony Creek recorded elevated levels of phosphorus (0.05mg/L). This was compliant with ANZECC criteria (0.05mg/L). All controls were verified to be in place for the site, with no activities being undertaken within the waterway.

Nambucca River recorded elevated levels of phosphorus upstream (0.09mg/L) and downstream (0.06mg/L), nitrogen upstream (0.7mg/L) and downstream (0.6mg/L) and nitrate upstream (0.04mg/L) and downstream (0.04mg/L). It is noted that all values were either consistent or decreased from upstream to downstream sites and were thus not likely to be construction activity related. All controls were in place for the site, with no activities being undertaken within the waterway. The agricultural land further upstream is a potential source for these levels of nutrients.

TSS noted to be outside of trigger levels at:

Stony Creek downstream (13mg/L). All controls were verified to be in place for the site, with no construction activity occurring in the waterway.

Nambucca river downstream (96mg/L). It was noted during sampling that wind chop along the bank was causing disturbance of sediment, potentially resulting in the higher levels of TSS. All controls were verified to be in place for the site, with no construction activities occurring within the waterway.

4. Sediment Basin Water Monitoring

Water was released from commissioned sediment basins after rainfall events on the 2nd and 9th of November 2016. A statistical correlation has been developed which identified the relationship between Turbidity (NTU) and Total Suspended Solids (TSS) for water quality in the WC2NH Project sediment basins in order to determine the NTU equivalent of 50mg/L TSS. This statistical correlation has been developed to meet EPL Licence No 20533 Condition L2.7 to determine compliance with the Water and/or Land Concentration Limits Condition L2.4. A positive correlation has been calculated between Total Suspended Solids (TSS) and Turbidity (NTU) (R² = 0.5953, p< 0.00001, n=184). The regression equation for the analytical results calculates a turbidity (NTU) value of 124.776 for a TSS value of 50mg/L. A safety factor of 30% has been applied to the NTU result of the correlation, providing a turbidity (NTU) value of 87.3432, rounded to an NTU value of 85. To measure NTU in the field a Horiba U-52G multi-parameter water quality meter has been utilised, which is maintained and calibrated in accordance with manufacturer's specifications. TSS sampling is being undertaken to ensure compliance with 1 in 10 sampling to validate the correlation.

Table 3 below has the water quality results recorded for the water release events:

| Date | Basin ID | Oil and Grease (visible) (Limit = No visible) | рН (6.5- 8.5) | Turbidity (NTU) (Limit <90 NTU) | TSS (mg/L) (Limit <50mg/L) | Approx Volume Discharged (kL) | Comments |

5. Noise Monitoring

Monthly routine construction noise monitoring was undertaken on the 7th and 15th of November 2016 at eight locations near to construction works. Monitoring results are available in Appendix A, Table 2.

All sites were within predicted levels for the activity being undertaken or were not audible from the nearest residence.

Additional noise monitoring was undertaken on 21st November 2016 as a result of concerns raised by a community member, results were compliant with the predicted levels for the activity.

6. Vibration Monitoring

Vibration monitoring was undertaken on the 21st of November 2016 in response to concerns raised by residents regarding nearby vibratory rolling at Albert Drive, results are available in Appendix A. Levels recorded were well below levels for building damage (5mm/s).

7. Dust Monitoring

Dust deposition gauges (DDG) were placed at nearby sensitive receivers from 29^{th} September 2016 to 31^{st} October 2016. DDG results are available in Appendix A.

All dust deposition gauges were below the level of concern for Total Insoluble Matter (TIM) and Ash Content (AC) (4g/m2.month or increase of 2g/m2/month) during the monitoring period, with the exception of DDG 3, which recorded 5.6g/m2/month TIM and 4.4g/m2/month AC. It was noted during dust gauge collection that the grass around the gauge had been mowed, with grass in the gauge itself. This was a likely contributor to the exceedance for this gauge. Additionally the gauge is located nearby to the Boral Quarry, which also contributes to the dust level readings at the gauge.

Water cart usage outside of standard construction hours has been utilised to assist with reducing dust emissions from the project, during public holidays on

Sundays throughout the Project. Pacifico is progressively stabilising cuts and fills that have reached their final profile.

8. Groundwater Monitoring

ACCIONA (Pacifico) have undertaken groundwater monitoring on the 29th of November 2016. The results from the groundwater monitoring is available in Table 4 of Appendix A.

pH levels noted to be outside of trigger levels at:

4BH010 – Cut 6 (6.48). It is noted that this was only slightly above trigger levels (6.264).

4BH021 – Cut 11 (6.79). It is noted that this was only slightly above trigger levels (6.79)

4BH037 – Fill 15 (7.17). It is noted that this bore was relocated from its original location due to it being within the construction footprint. Trigger levels are from the original location and therefore may not correspond with the new location due to differences in groundwater quality.

Conductivity noted to be outside of trigger levels at:

4BH037 – Fill 15 (8.65mS/cm). It is noted that this bore had to be relocated from its original location due to it being within the construction footprint. Trigger levels from the original location therefore may not correspond with the new location entirely due to differences in groundwater quality.

9. Acoustic Investigations

Acoustic Investigations (modelling) have been conducted and approved for several Out of Hours Works proposed to model impact on residents during the month of August 2016. A summary of these approvals is below in Table 4.

| OOH Request Title | >5dB(A) above background | Approval Date |
|--|-----------------------------|---------------|
| Installation of Subsoil Drainage between | | |
| CH53620-55240 | Ν | 2/11/2016 |
| | | |
| Girder Lift - North Nambucca River | Ν | 4/11/2016 |
| Rosewood Road Bridge Concreting | | |
| Preparation | Ν | 7/11/2016 |
| Generator for bore pump at CH56600 | Ν | 17/11/2016 |

Table 4 – August Out of Hours Works approved under L4.2 (d) Acoustic Investigation (Modelled)

| Concrete finishing and wet curing at Upper | | |
|---|---|------------|
| Warrell Creek | Ν | 17/11/2016 |
| Concrete finishing works at Mattick Road | Ν | 18/11/2016 |
| Clean out of McGuiness Dam on a Saturday | | |
| and Sunday | Ν | 23/11/2016 |
| Concreting Works at Floodplain Bridge 2 | Ν | 24/11/2016 |
| SMZ Conditioning and dust suppression at | | |
| CH57550-61300 | Ν | 30/11/2016 |
| CCTV of pavement drainage lines between | | |
| CH46050-46850 | Ν | 30/11/2016 |
| Linemarking at the corner of Old Coast Road | | |
| and the Pacific Highway | Ν | 30/11/2016 |

Other works outside of standard construction hours already approved under section L4.2 (d) of the EPL that took place during August 2016 were:

- Out of hours basin treatment

Field monitoring has been undertaken for several activities throughout November 2016. Results for this are summarised in Appendix A.

10. Complaints

10.1 Summary of Complaints for the month

7/11/2016 – Resident contacted Pacifico regarding concerns about high wind generating dust. Area superintendent was contacted and water carts were focused to this area to minimise dust generation. No further complaints regarding dust were received from the resident for the rest of the month.

9/11/2016 – Manager of local waste management facility contacted Pacifico regarding concerns about segregation of waste before it was brought to the facility. Superintendents were contacted regarding the concern which was included in the weekly global toolbox about the requirements to separate waste as much as possible before disposal.

9/11/2016 – Resident contacted Pacifico regarding water draining onto their property. Pacifico and RMS both inspected the property the following day and noted that all environmental controls were in place for the area and had worked effectively for the previous rainfall event.

18/11/2016 – Resident contacted Pacifico regarding concerns around vibration and noise from rollers working near Albert Drive. It was ascertained that vibration was the main concern regarding building damage, with monitoring undertaken 21/11 while the roller was active. Results were compliant with building damage guidelines which was explained to the resident (See Table 5 below).

18/11/2016 – Resident contacted Pacifico regarding concerns around noise from construction for the North Facing Ramps at 5pm. Monitoring was undertaken 20/11 with similar equipment operating and results are available below (see table 7).

28/11/2016 – Resident contacted Pacifico regarding concerns around dust generation from site during very windy conditions. Area Superintendent reduced activities within the area to minimise dust generation. Water carts were being used in the area at the time.

11. Non-Compliance

11.1 Summary of Non-compliances

No non-compliances against the ACCIONA Environmental Protection Licence (EPL) 20533 occurred in November 2016.
